2. Citations and explanations (Rule 70.7)

This report makes reference to the following document:

D1: DE 1 832 502 U

Document D1, which is considered to represent the closest prior art, discloses (figure) a similar pass-through dishwasher from which the subject matter of claim 1 differs in that, in the latter, the direction of the flow of media out of the media nozzles in the rinsing zone, clear rinsing zone and drying zone can be varied in a regulated manner.

The subject matter of claim 1 is thus novel (PCT Article 33(2)).

The present invention can therefore be considered to address the problem of providing an alternative for affecting the flow of air within the dishwasher, in such a way that sufficient dry air is always available in the drying zone, and that no clouds of steam (water vapours) are formed in the area of the inlet and outlet of the dishwashers, and no steam exits the dishwasher.

## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/EP2005/000446

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The solution to this problem, as proposed in claim 1 of the present application, involves an inventive step (PCT Article 33(3)) for the following reasons: the abovementioned nozzles cannot be directly derived from D1 and do not appear to represent an obvious solution for affecting the flow of air within the dishwasher.

Claims 2-16 are dependent on claim 1 and thus also meet the PCT novelty and inventive step requirements.
